

## Y8 What if ?...

*You have been learning about glaciated landscapes in your new topic in Geography. We would like for you to take up our Enrichment challenge to complete a written piece of work to describe what the world could be like if all the glaciers melted. You may want to do some research of your own before you start writing your ideas down but please be as creative as you wish!*

### You should aim to include the following in your written piece:

- How much global sea levels would rise if all the glaciers did melt
- Reports from the places worst affected by this sea level rise (e.g. low-lying countries/towns/cities)
- Reports from other locations that could be impacted by glacier melt e.g. the Himalayas, where millions of people rely on the water produced from glaciers.
